Market Commentary

Platts European Gasoline Daily Market Analysis

- Trading activity heard in FOB Med MOC
- Two Iraqi refineries producing at full capacity

The European gasoline market began the week on quieter notes Feb. 9, as International Energy Week began, with some trading activity observed during the Platts Market on Close assessment process.

In the Northwest Europe barge market, activity remained subdued with some positive movement on Eurobob cash differentials, but limited buying interest for its non-oxygenated counterpart.

Looking toward the Mediterranean, Med/North spreads remained well supported compared to previous years, providing momentum for an arbitrage opportunity from the Amsterdam-Rotterdam-Antwerp hub.

In wider news, Iraq's Salahaddin-3 and North-2 refineries are producing at full capacity as the country seeks to transition from being an importer of refined products to becoming an exporter, the oil ministry said in a statement on its Facebook page Feb. 8.

The two refineries are part of Iraq's Baiji refining complex, also known as al-Sumoud, and each has a capacity of 70,000 barrels/day, the ministry said. The Karbala refinery is also operating at 100% capacity, it said.

Platts assessed the front-month FOB AR Eurobob barge at \$669.75/metric ton, up \$9.75/mt day over day, with the equivalent gasoline barge crack assessed at \$12.04/b, up 68 cents day over day.

The February/March spread was up \$1/mt at minus \$6.75/mt day over day, while the March/April spread was up 25 cents/mt at minus \$30.25/mt.

The February Med/North gasoline differential — the spread between the February FOB Med swaps and the

Platts European Naphtha Daily Market Analysis

- Naphtha crack spread narrows slightly
- Challenging petrochemical environment impacts naphtha

The European naphtha market was slightly stronger day over day Feb. 9, as the crack spread narrowed and prompt time spreads strengthened.

The Platts Market on Close assessment process saw an active naphtha cargo window with nine indications in total on bid and offer sides during the window.

European naphtha market participants in the International Energy week in London said there was relative weakness in petrochemical demand for feedstock naphtha, caused by the challenging

economic environment in the downstream chemical industry and narrow margins. The relatively low naphtha flat price, on the back of a decline in crude oil prices over the past year, does help margins, but the industry remains in challenging market conditions, especially given competition from cheaper imports.

In recent refinery news, Valero reported flaring at its San Francisco-area refinery in Benicia on Feb. 8 as the refinery begins the shutdown process, according to a filing on Feb. 9. In the Hazardous Materials Spills Report filed with the Governor's Office Emergency Services, Valero said "an unexpected flaring event caused 500 lb of vapor sulfur dioxide to release into the atmosphere, passing the reportable quantity. The release is ongoing and reportedly caused by the refinery shutting down operations." Valero said on Jan. 29 it would idle the refinery at the end of February due to mandatory safety requirements.

The front-month CIF NWE naphtha crack was assessed at minus \$5.49/b, narrower by 21 cents/b day over day.

The front-month CIF NWE naphtha swap was assessed at \$559.50/mt, up \$6.25/mt day over day.

The February/March time spread was assessed at \$6/mt, up 25 cents/mt day over day, while the March/April time spread was assessed at \$6.25/mt, up 25 cents/mt day over day.

The front-month East-West spread – the spread between the CFR Japan naphtha cargo swap and the CIF NWE equivalent – was at \$37.75/mt, 50 cents/mt wider day over day, while the April spread was at \$35.75/mt, 50 cents/mt wider day over day.

Platts NW Europe Naphtha CIF Cargo Daily Rationale & Exclusions

The CIF NWE naphtha cargo <PAAAL00> was assessed at \$569.50/mt based on the following inputs:

Value on Feb. 21 was assessed at \$571.01/mt based on an outstanding bid for a 12,500-mt cargo.

Platts Mediterranean Naphtha FOB Cargo Daily Rationale

Naphtha FOB Med Cargo <PAAAI00> assessment rationale:

The FOB Mediterranean naphtha cargo assessment was derived as a freight netback from the CIF NWE

naphtha cargo assessment, using the following assessments: CIF NWE naphtha cargo assessment minus the cost of transporting a 27,500 mt naphtha cargo from Alexandria in the Mediterranean to Rotterdam.

Platts European Jet Daily Market Analysis

- Strong arbitrages continue to pull volumes from Middle East
- France's Gravenchon carrying out unit maintenance

The European jet fuel complex slipped day over day Feb. 9 amid easing supply constraints, with imports coming in from the Middle East.

Jet CIF NWE dropped 75 cents/mt to a differential of \$77.50/mt above the ICE low sulfur futures gasoil contract.

S&P Global
Energy

Arbitrage incentives continued to pull product from the Persian Gulf. Arbitrage incentives have averaged around \$4.85/b in February from the Persian Gulf to the Mediterranean, according to S&P Global Energy calculations. The Persian Gulf to NWE incentive has averaged \$3.12/b in February so far.

Imports to the Northwest Europe region in the week beginning Feb. 9 were expected to rise more than 300,000 mt week over week to 550,000 mt, data from S&P Global Commodities at Sea data showed. According to the data, 211,000 mt was expected from the UAE and 150,000 mt from Kuwait.

FOB FARAG barge differentials softened 75 cents/mt day over day to a differential of \$68.75/mt above the ICE LSGO. In February, flat prices remain on average \$22/mt higher than the average for January. A high flat price may dampen demand in the inland market as traders wait for prices to settle.

In refinery news, France's Gravenchon refinery near the port of Le Havre was carrying out planned unit maintenance from Feb. 8, the company said Feb. 6.

The restart is planned for Feb 12-13, it added.

Canada's North Atlantic acquired the Gravenchon refinery in late November 2025 as part of a deal that included buying ExxonMobil's stake in its French subsidiary Esso, Platts reported Nov. 28.

Germany's Ingolstadt refinery will start its planned maintenance at the end of February, the Donaukurier newspaper reported Feb. 7.

Market sources previously said the refinery has planned maintenance from late February through early April, lasting about 30 days.

The company declined to comment.

Ingolstadt carried out minor maintenance in March 2025. Its last major maintenance was in spring 2023.

Platts is part of S&P Global Energy.

Platts NWE Jet Barge Daily Rationale & Exclusions

Jet FOB FARAG <PJABA00> assessment rationale:

Platts based the FOB FARAG jet fuel barge assessment on the previously established relationship between the jet fuel cargo and barge markets, in the absence of competitive indications in the Platts Market on Close assessment process

Exclusions: None

Platts NWE Jet Cargo Daily Rationales & Exclusions

Jet CIF NWE Cargo <PJAAU00> assessment rationale:

Platts based the CIF NWE jet fuel cargoes assessment on the following inputs, expressed as differentials to the front-month ICE LSGO futures contract: Platts assessed value on March 2 at \$74.96/mt above a competitive bid in the Platts Market on Close assessment process. A backwardation of around 72 cents/mt was applied to the front and back of the physical curve.

Jet FOB Med Cargo <AAIDL00> Assessment Rationale:

The FOB Mediterranean jet cargo assessment was derived as a freight netback to the CIF Northwest Europe jet cargo assessment, using the following calculation: CIF NWE jet cargo assessment minus the

cost of transporting a 27,500 mt clean cargo from Augusta, Italy, to Rotterdam, Netherlands.

West Africa Daily Refined Products Commentary

- Gasoline markets in West Africa stable
- Prices rise in outright terms on crude

Gasoline markets in West Africa were heard stable
on the day, with European markets quiet amid the
International Energy Week.

One trader said value remained in the "low-20"
range vs. Eurobob balmo pricing, or "about flat" against
Platts FOB MED pricing.

Platts assessed the STS Lome gasoline price at
\$686/mt and a \$23/mt premium to Eurobob balmo. The
assessment reflects 0.745kg/l.

Outright prices have rebounded as the crude price

strengthened over the past week, amid heightened geopolitical risk.

Meanwhile Platts assessed distillates steady on the day, after falling week over week.

Med diesel prices have been strengthening, and are now above WAF diesel.

Platts assessed 50ppm Low-Sulfur Diesel STS Lome cargoes at a \$8/mt premium to Feb ICE LSGO and a flat price of \$698.25/mt.

And the FOB West Africa 50ppm Diesel price was assessed at \$700.25/mt and a \$10/mt premium to Feb ICE LSGO.

And Platts assessed Butane DAP Lagos at \$482.25/mt and a \$130/mt premium to the USGC Butane forward strip.

Platts European Gasoil Daily Market Analysis

- FOB ARA barges 50ppm gasoil differential assessed lower
- 0.1% CIF Mediterranean gasoil cargo differential to ICE LSGO strengthens

The Platts-assessed 50ppm FOB ARA barges differential to the front-month ICE LSGO was assessed down 25 cents to minus \$10.25/mt on Feb. 9

European-based market participants said there has been some limited buying interest for 50ppm gasoil in recent weeks, though supply remains ample.

Stocks of diesel and gasoil at the Amsterdam-Rotterdam-Antwerp hub rose 2.4% on the week to Feb. 5, data from Insights Global showed. Despite the rise, this represents a year-over-year decline of 17% from the same week in 2025.

Moving on to the European 0.1 % gasoil cargo market, the Platts-assessed differential for 0.1 % S CIF Northwest European cargoes versus the front-month ICE LSGO rose by \$1 to minus \$12.25/mt.

In France, the heating-oil market weakened in the week ending Feb. 6, as warmer weather prompted end-users to cut purchases. France is currently the only Northwest European country that still permits 1,000 ppm (0.1 %) gasoil for heating oil. Starting in January 2027, it will adopt the stricter 50 ppm limit already in force in Germany and Switzerland.

Meanwhile, the Platts-assessed differential for 0.1 % S CIF Mediterranean cargoes versus ICE LSGO rose by \$6.75 to \$3.50/mt.

A European-based market participant had recently noted that the market in the Mediterranean has been tight due to refinery outages and strong demand for 0.1 % gasoil in Libya, where the fuel is used for road transport and power generation.

Moving on to European gasoil swaps, the CIF Mediterranean 0.1%S gasoil cargo Feb. balance-of-the-month swap was assessed up \$7 to \$7.25/mt, after a trade was seen during the Platts Market on Close on the day.

Platts NWE Gasoil 0.1% Barge Daily Rationale & Exclusions

Gasoil .1%S (1000ppm) FOB ARA Barge <AAYWT00> assessment rationale:

The FOB ARA 0.1%S gasoil barge assessment was based on the previously established relationship between the physical and paper markets, in the absence of competitive indications in the Platts Market on Close assessment process.

Platts European Diesel Daily Market Analysis

- Diesel cargo differentials rise
- Weaker margins lower refinery output in Europe

The European diesel complex edged higher day over day, with cash differentials rising in Northwest Europe and Mediterranean cargo markets.

In the futures market, Platts assessed ICE low sulfur gasoil futures down day over day, with the front-month contract falling \$5.75/mt to \$694.25/mt Feb. 9. The Mo1/Mo2 spread narrowed to \$4/mt, down \$1.50 day over day. The softening of the structure was most pronounced in the Mo2/Mo3 and Mo3/Mo4 spreads, with March/April down \$2.50 to \$9.50/mt and April/

May \$2.25 lower to \$9/mt.

This meant the Mo1/Mo6 spread fell \$8 to \$35.75/mt day over day, returning to levels last seen on Jan. 20 when the six-month spread was assessed at \$36.50/mt, Platts data showed.

The stronger backwardation between March and May reflects market expectations of a tighter supply due to refinery maintenance toward the end of the first quarter in Europe, market sources said previously.

Maintenance has already begun in Med refineries across Greece, Spain and Italy, while in the North, plants in France and Germany have started smaller turnarounds in recent days.

While some refineries have reduced their runs in recent weeks, this does not necessarily mean the spare capacity will be used next month when turnarounds begin. The reduction in production is due to lower product cracks, as all products, apart from middle distillates, saw a weaker start to the year, European distillate traders said.

Gasoline cracks have picked up since late January, with fuel oil seeing some uplift as well. But with the current CPC disruptions limiting the spot availability of the crude loaded in the Black Sea, Dated Brent differentials rallied in January, hitting over a three-year high on Jan. 16, Platts reported earlier.

Rising Dated Brent differentials reflected tighter fundamentals in the spot market, somewhat at odds with the oversupply narrative that has dominated headlines in recent months.

"I see a strong case for a tighter market in March", one European distillate trader confirmed.

Platts NWE ULSD Barge Daily Rationale & Exclusions

ULSD 10ppmS FOB ARA Barge <AAJUS00> assessment rationale:

Platts based the ULSD FOB ARA barge assessment on the following input, expressed as differentials to the front-month ICE LSGO futures contract:

Platts assessed the value on Feb. 14 at minus \$2.25/mt below a competitive offer in the Platts Market on Close assessment process.

Platts assessed the value on Feb. 22 at minus \$1.25/mt above a competitive bid in the MOC.

A straight line was drawn between Feb. 14 and Feb. 22 and extended to the front and the back of the curve.

Exclusions: None

Platts is part of S&P Global Energy.

Platts NWE ULSD Cargo Daily Rationales & Exclusions

ULSD 10ppmS CIF NWE Cargo <AAVBG00> assessment rationale:

Platts based the CIF NWE diesel cargo assessment on the following input, expressed as differentials to the front-month ICE LSGO futures contract:

Platts assessed the value on Feb. 21 at \$9.99/metric ton below a competitive offer in the Platts Market on Close assessment process.

Platts assessed the value on Feb. 22 at \$10.37/mt between a competitive bid and a competitive offer in the MOC.

Platts assessed the value on Feb. 23 at \$9.99/mt below a competitive offer in the MOC.

Platts assessed the value on Feb. 26 at \$7.75/mt below a competitive offer in the MOC.

A straight line was drawn between Feb. 23 and Feb. 26, a previously established paper structure of around 22 cents/mt in backwardation was applied to the back of the curve. A flat structure was applied at the front.

Exclusions: None

ULSD 10ppmS CIF NWE Basis UK Cargo <AAVBH00> assessment rationale:

Platts based the CIF UK diesel cargo assessment on the previously established relationship between the physical CIF ARA and CIF UK cargo markets, and increased 25 cents/mt, in the absence of competitive indications in the MOC.

Exclusions: None

ULSD 10ppmS CIF NWE Basis Le Havre Cargo <AAWZC00> assessment rationale:

Platts derived the CIF Northwest Europe (Le Havre) diesel cargo assessment as a freight net forward from the CIF NWE (ARA) diesel cargo assessment, using the following assessments: CIF NWE (ARA) diesel cargo assessment plus the cost of transporting a 30,000 mt clean cargo from a basket of ports in Northwest Europe to Le Havre, France.

Exclusions: None

Platts is part of S&P Global Energy.

Platts European Fuel Oil Daily Market Analysis

- Bad weather disrupts Mediterranean bunker demand
- High freight rates limit VLSFO exports from Europe

The European very low sulfur fuel oil market remained heavy Feb. 9, while the high sulfur fuel oil market was characterized by limited demand.

In the European very low sulfur fuel oil market,

supply and demand fundamentals remained heavy across Europe.

In the Mediterranean, bad weather continued to negatively affect bunkering demand across key ports.

Premiums for VLSFO product in both the Americas and Singapore remained robust; however, elevated freight rates limited the volume of product leaving the region.

"It makes sense that some product is moving," a Mediterranean-based trader said; however, they reiterated volumes moving were lower due to high freight.

Market participants noted a similarly well-supplied LSFO market, with high freight-trapping volumes in Europe.

The Northwest European high sulfur fuel oil market remained constrained, with demand still weak despite a modest uptick in appetite after a quiet January.

Premiums for bunkering at Dutch ports, driven by the implementation of EU's Renewable Energy Directive III legislation, have further suppressed demand in Rotterdam and Amsterdam.

In the Mediterranean, persistent adverse weather has disrupted bunkering operations across the basin, leading to port closures and a pronounced slowdown in market activity. On the supply side, traders noticed no shortages and ample availability

Trading activity was quiet in the Platts Market on Close assessment process Feb. 9, with 8,000 metric tons in the Rotterdam HSFO barge market and 2,000 mt traded in the VLSFO equivalent.

There was one HSFO CIF Med cargo offer that could not find a buyer in the fuel oil cargo MOC.

Platts is part of S&P Global Energy.

Platts FOB Rotterdam 0.5% Marine Fuel Barge Daily Rationale & Exclusions

Marine Fuel 0.5% FOB Rotterdam barge \$/mt <PUMFD00> assessment rationale:

Platts assessed the 0.5%S FOB Rotterdam barges based on the following inputs:

Value on Feb. 14 was assessed at \$421.625/mt, between a narrow bid-offer spread for front-end dates in the Platts Market on Close assessment process.

A daily contango of around 3 cents was applied to the front-end dates and extended to the front and back of the physical curve in line with the paper structure.

Exclusions: None

Platts Russian Refined Products Daily Commentary

- Domestic gasoline market uncertainty increases
- Russia main supplier of products in Tajikistan in 2025

Sentiment on the Russian domestic gasoline market remained mired in uncertainty, with price drops

alternating with increases. After finishing on a weak note last week, gasoline prices rebounded Feb. 9, but market participants were wary of pegging that move to a bullish trend.

Factors pointing to a potential downside were the weak current demand coupled with high stock levels of about 2 million mt, according to sources. However, potential renewed attacks on oil depots and refineries could still drive the market. Producers might also increase export volumes in view of the lackluster domestic demand.

Diesel, meanwhile, was mostly coming off, also on the back of healthy stocks of around 3.6 million mt and diminishing interest in intermediate and winter grades. Despite the approaching spring, demand in summer diesel was also slack.

Separately, Tajikistan imported more than 1.2 million mt of oil products in 2025, 162,000 mt more than in 2024, the TASS news agency reported, citing the country's antimonopoly service. Of that, 84% came from Russia, 5% from Uzbekistan, 3% each from Kazakhstan and Turkmenistan, 2.9% from Belarus and 0.5% from Kyrgyzstan. Tajikistan imported 628,000 mt of diesel, 458,100 mt gasoline and 349,900 mt LPG.

Platts European Feedstocks Daily Commentary

- Low sulfur gasoil sees stable demand, ample supply
- VGO influenced by middle distillate cracks

European low sulfur straight run and vacuum gasoil experienced stable demand and ample supply across Europe, Feb. 9.

LSSR differentials have been subdued amid a well-supplied market and limited refinery demand across Europe. Market participants said these fundamentals were beginning to recover, with increased buying activity across the northwest.

Lower VLSFO cracks continued to limit blending

demand into the European bunkering pool.

"Increased US gasoline demand will strengthen European LSSR," a Northwest European trader said, referring to the spring and summer months.

VGO differentials remained influenced by middle distillate cracks, which remained stable.

Platts is part of S&P Global Energy

VGO Deal reported

None.

Platts North Sea Crude Daily Market Analysis

- Buying interest builds for early-March cargoes
- CPC Blend supply remains uncertain

Buying appetite in the North Sea crude oil market continued to reflect higher values Feb. 9 as supply thins.

Indications in the Platts Market on Close assessment process Feb. 9 demonstrated further gains to differentials with buying interest centered around early-March laycans.

Repsol hit a TotalEnergies bid for a WTI Midland cargo arriving in Rotterdam over March 5-9 at a premium of \$3.50/b over Dated Brent and was the sole cargo trade during the Platts Market on Close assessment process.

A separate Vitol bid for a WTI Midland cargo arriving in Rotterdam over March 9-13 was left standing at the close at a premium of \$3.70/b over Dated Brent, indicating higher premiums of later-dated barrels.

TotalEnergies also floated bids for first-decade March loaders of Forties and Troll at premiums of \$2.30/b and \$3.10/b, respectively. Both bids could not attract sellers by the London close.

The recent uptick in North Sea crude differentials tracked a tightening supply landscape.

Shorter loading programs for North Sea crude grades have contributed to the tighter outlook, while disruptions to WTI Midland continued to cascade into landed European values.

"[March availability is] pretty thin, I think," one Europe-based crude oil trader said Feb. 9, noting that several factors were affecting WTI Midland outflows. "Weather is a big factor throughout the supply chain, lost production at [a] wellhead, slow loadings, and freight is very expensive as boats get held up everywhere."

A key factor that could affect the regional supply balance is the recovery in CPC Blend flows following the completion of works at its loading terminal.

However, the timing and stabilization of a recovery in outflows of the Kazakh grade remained unclear, North Sea crude oil traders said.

While buyers in Asia had been heard procuring CPC Blend barrels amid its current discounted levels, European buyers — who would purchase these cargoes using more just-in-time supply chain models — are still avoiding the grade due to logistical uncertainties.

Buyers may monitor the situation for several more weeks as confidence in export volumes of the key Kazakh grade continued to grow, another North Sea crude oil trader said.

The Buzzard oil field made up 20% of North Sea Forties Blend crude output in the week to Feb. 8, Forties pipeline operator Ineos said Feb. 9.

The sulfur content of Forties Blend declined to 0.54%, while its gravity rose to 41.108 API, according to a conversion table on the company's website.

Platts is part of S&P Global Energy

Platts North Sea Dated Brent, BFOE, CFD Assessment Rationales & Exclusions

Dated Brent <PCAAS00> assessment rationale:

Of the six crudes in the Dated Brent basket, Forties, Troll, and WTI Midland were seen in the Platts Market on Close assessment process.

Platts assessed Brent Blend 10 cents/b higher Feb. 19 to March 8, with flat structure rolled over back-end dates, reflecting the strength demonstrated by Forties and in the absence of indications testing the Feb. 6 assessment.

Platts assessed Forties higher in a 3-cent/day contango structure Feb. 19 to March 7, using an outstanding bid March 7. March 7-9 was assessed in a flat structure.

Platts assessed Oseberg unchanged Feb. 19 to March 8, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Feb. 6 assessment.

Platts assessed Ekofisk unchanged Feb. 19 to March 8, with flat structure rolled over back-end dates, reflecting steady market fundamentals, and in the absence of indications testing the Feb. 6 assessment.

Platts assessed Troll higher in a flat structure Feb. 19 to March 2, using an outstanding bid March 2. March 2-9 was assessed in a 3 cents/day backwardated structure.

Platts assessed FOB WTI Midland higher, reflecting a higher CIF Rotterdam assessment and a lower freight adjustment factor.

Platts assessed CIF WTI Midland in a flat structure Feb. 21 to March 6, using a traded bid March 6-8. March 8-9 was assessed in a 15 cents/day contango structure, using an outstanding bid March 10-12.

Ekofisk was the most competitive grade Feb. 19-28. WTI Midland was the most competitive grade March 1-9.

BFOE (PCAAQ00-PCAR00,PCARR00) assessment rationale:

Platts assessed Apr Cash BFOE using Apr/May EFP roll heard during the day.

Platts assessed May Cash BFOE using an outstanding bid in the MOC.

Platts assessed Jun Cash BFOE using May/Jun EFP roll heard during the day.

CFD (PCAKA00-AALDA00) assessment rationale:

Platts assessed Feb 16-20 using a widened Feb 16-20 versus Feb 23-27 CFD roll than heard during the day, as later parts of the curve had been proven wider.

Platts assessed Feb 23-27 using multiple traded bids and offers.

Platts assessed Mar 2-6 using an outstanding offer.

Platts assessed Mar 9-13 using a traded bid.

Platts assessed Mar 16-20 using a widened Mar 9-13 versus Mar 16-20 CFD roll than heard during the day, as earlier parts of the curve had been proven wider.

Johan Sverdrup FOB North Sea (AJSVA00, AJSVB00) assessment rationale:

Platts assessed Johan Sverdrup unchanged Feb. 19 to March 8, with flat structure rolled over back-end dates, reflecting steady market fundamentals and in the absence of indications testing the Feb. 6 assessment.

Exclusions: None.

Platts NW Europe Fuel Oil SR 0.5-0.7%S Daily Rationale & Exclusions

**Straight Run 0.5-0.7%S FOB NWE cargo
<PKABA00> assessment rationale:**

Platts assessed the LSSR FOB NWE differential at
\$4.20/b below M1 ICE Brent crude futures, based on
previous market indications. The outright LSSR price
was derived using the LSSR conversion factor of 6.77
dollars per metric ton. No bids or offers were reported
in the Platts Market on Close assessment process.

Exclusions: None

Platts is part of S&P Global Energy

2026 calendar for FOB AR gasoline barge winter-to-summer change

Effective March 17, 2026, Platts, part of S&P Global
Energy, will start reflecting summer grades of gasoline
on a pro-rated basis in its FOB Amsterdam-Rotterdam
gasoline barge assessments.

The following calendar applies:

March 17: First day reflecting summer grade
 March 23: First full five-day period reflecting summer grade
 March 24: Last full five-day period reflecting winter grade
 March 26: Last day reflecting winter-grade gasoline
 March 27: Summer grade fully reflected
 A spreadsheet detailing the changes is available on request.

Please send feedback and questions to PL_LightendsEurope@spglobal.com, with a cc to pricegroup@spglobal.com.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

2026 calendar for gasoline cargo winter-to-summer transition

Effective March 9, 2026, Platts, part of S&P Global Energy, will start reflecting summer grades of gasoline on a pro-rated basis in its CIF Northwest European and FOB Mediterranean gasoline cargo assessments.

March 9: First day reflecting summer-grade gasoline
 March 11: First full five-day period reflecting summer gasoline
 March 17: Last full five-day period reflecting winter gasoline
 March 20: Last day reflecting winter-grade gasoline
 March 23: Summer grade fully reflected
 A spreadsheet detailing the changes is available on request.

Please send feedback and questions to PL_LightendsEurope@spglobal.com, with a cc to pricegroup@spglobal.com.

Platts to update European SAF assessments, March 2, 2026

Platts, part of S&P Global Energy, will exclude Category 3 Tallow from being considered an eligible feedstock for the Platts European SAF assessments.

Platts will also update the minimum Greenhouse Gas (GHG) savings level to 80% for CIF Northwest Europe cargoes, and will set guidelines on the Proof of Sustainability (PoS) transfer timeline, effective March 2, 2026.

Category 3 Tallow exclusion

The change follows research indicating that Category 3 Tallow is not eligible for compliance within the scope of the Renewable Energy Directive (RED) in Germany and, subsequently, the ReFuel EU Aviation regulation. Market feedback supported that SAF derived from Category 3 animal fats has limited fungibility due to sustainability and eligibility concerns.

Current Platts SAF methodology reflects non-crop RED-compliant feedstocks, with the exception of Palm Fatty Acid Distillates.

The change will impact Platts SAF CIF NWE (AJNWD00) and SAF FOB FARAG HEFA-SPK (SUAF00) assessments.

GHG Savings

Platts will lower the minimum GHG savings threshold for the SAF CIF NWE cargo assessment (AJNWD00) from 85% to 80%, as calculated under the European Commission's RED II framework. This change aligns the SAF FOB FARAG barge assessment (SUAF00) and reflects SAF trade flows arriving in Europe.

PoS transfer timeline

For both the SAF CIF NWE cargo and SAF FOB FARAG barge assessments, Platts will update expectations on the timing of PoS documentation transfer.

From March 2, PoS documents will need to be transferred within 30 calendar days of bill of lading for FOB trades or within 30 calendar days of the completion of discharge for delivered trades, in line with ISCC guidelines. The current methodology

stipulates that the transfer should be made by the seller within a reasonable timeframe.

These changes were initially proposed Jan. 6.

These assessments appear in Biofuelscan, Weekly Biomass Based Diesel report, Oilgram, Marketscan and the Platts price database under the codes above.

Please submit any feedback, comments, or questions to platts_biofuels@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

SUBSCRIBER NOTE: 2026 Calendar for CIF NWE ULSD, CIF Med Gasoil and ULSD cargoes summer-to-winter transition

Effective Aug. 27, Platts, part of S&P Global Energy, will start reflecting winter-grade diesel in its CIF NWE ULSD cargo assessment, and its CIF Med ULSD and gasoil cargo assessments. The change also affects related netbacks.

The following calendar applies:

Summer-to-winter transition:

- Aug. 27: First day of reflecting winter grade
- Sept. 1: First full five-day period reflecting winter grade
- Sept. 4: Last full five-day period reflecting summer grade
- Sept. 10: Last day reflecting summer grade
- Sept. 11: Winter grade fully reflected

The following codes are affected: ULSD 10ppmS CIF NWE Cargo AAVBG00; ULSD 10ppmS CIF NWE Basis Le Havre Cargo AAWZC00; ULSD 10ppmS CIF NWE Basis UK Cargo AAVBH00; ULSD 10ppmS FOB NWE Cargo AAVBF00; ULSD 10ppmS FOB NWE Basis Le Havre Cargo AAWZD00; ULSD 10ppmS CIF Med Cargo AAWYZ00; ULSD 10ppmS FOB Med Cargo AAWYY00; Gasoil .1%S (1000ppm) CIF Med Cargo AAVJJ00; Gasoil

0.1%S FOB Med Cargo AAWJI00

Platts will consider all comments received and will make comments not marked as confidential available upon request.

SUBSCRIBER NOTE: 2026 calendar for FOB ARA ULSD Barges summer-to-intermediate transition

Effective Sept. 1 Platts, part of S&P Global Energy, will start reflecting German intermediate specification for ultra low sulfur diesel on a pro-rated basis in its FOB Amsterdam-Rotterdam-Antwerp (ARA) barge ULSD assessment (Code: AAJUS00).

The following calendar applies:

- Summer to Intermediate
- Sept. 1: First day reflecting intermediate grade in the assessment
- Sept. 4: First full five-day period reflecting intermediate grade
- Sept. 7: Last full five-day period reflecting summer grade
- Sept. 9: Last day summer grade is reflected in assessment
- Sept. 10: Intermediate grade fully reflected

A spreadsheet detailing the changes is available on request by contacting PL_MiddistEurope@spglobal.com. Please send any comments or questions to europe_products@spglobal.com and copy pricegroup@spglobal.com. For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts updates sustainable aviation fuel FOB Straits assessment Feb 2

Platts, part of S&P Global Energy, has updated its daily FOB Straits neat sustainable aviation fuel freight netback assessment to a market-based price assessment, effective Feb. 2.

The update follows observations of a growing supply of SAF in the Straits of Malacca region, driven by the transition to low-carbon fuels following the development of the Carbon Offsetting and Reduction Scheme for International Aviation, or CORSIA, coupled with increasing country-level SAF targets. The current annual production capacity for this region is close to 1.9 million metric tons of SAF, according to Platts, with additional announced capacity coming online in the near future. The new market-based price assessment aligns with the increasing need for pricing transparency in the region.

The updated assessment considers market information reported to Platts and published throughout the day, including firm bids and offers, transactions and indications, as well as any other data deemed relevant to the assessment process. In the absence of neat SAF spot market data, Platts may also take into consideration the freight netback value of the Platts CIF Northwest European neat SAF cargo assessment (AJNWD00), the cost of SAF feedstocks and other adjacent markets, such as renewable diesel (HVO) and China-exported SAF.

Platts launched the FOB Straits neat SAF netback assessment Oct. 1, 2024. More details can be found here.

The updated assessment reflects a parcel size of 5,000-10,000 mt, loading 15-30 days forward from the date of publication. Other volumes may be taken into consideration and normalized to the assessed range. SAF vessels loading out of the Straits could consist of multiple cargoes or be commingled with other compatible products.

The updated assessment remains on an FOB Straits basis. Other locations within Southeast Asia, such as Indonesia and Thailand, will be considered for the assessment but may be normalized to reflect the Straits basis.

The assessment reflects ASTM D7566 standard specifications for synthesized paraffinic kerosene from hydroprocessed esters and fatty acids (SPK-HEFA), as referenced in Annex A2, with a relative density of 760 kg/cu m (at 15 degrees Celsius). The assessment reflects SAF produced from Renewable Energy Directive-compliant feedstocks, excluding palm fatty acid distillates and category 3 tallow, and reflects minimum greenhouse gas savings of 80%. Other GHG savings levels, such as 85% GHG savings, will be considered but may be normalized to the minimum basis level. The assessment reflects ISCC EU-certified cargoes. ISCC CORSIA-certified cargoes will also be considered, but may be normalized.

Platts also publishes a SAF FOB Straits premium versus the Platts Jet Kero FOB Spore assessed forward strip (AAPJZ00), including a conversion to \$/mt. The forward strip, also known as the MOPS strip, is defined as the average of the forward values for jet kero loading 15 to 30 days forward from Singapore, coinciding with the same loading dates reflected in the SAF FOB Straits assessment.

The specifications of the SAF FOB Straits premium are the same as the outright price mentioned above.

The assessments and the symbols are:

Description	Biofuels symbol	Oil symbol (mirror)
SAF FOB Straits \$/bbl	SFSBB00	SFSBR00
SAF Premium FOB Straits \$/bbl	SHSHB00	SHSHC00
SAF FOB Straits \$/bbl MAvg	SFSBB03	SFSBR03
SAF Premium FOB Straits \$/bbl MAvg	SHSHB03	SHSHC03
SAF FOB Straits \$/mt	SFSMT00	SFSMR00
SAF Premium FOB Straits \$/mt	SFSHA00	SFSHC00
SAF FOB Straits \$/mt MAvg	SFSMT03	SFSMR03
SAF Premium FOB Straits \$/mt MAvg	SFSHA03	SFSHC03

The updated market-based assessment is published as an outright price in \$/mt under the symbol SFSMT00, and in \$/b under the symbol

SFSBB00, by applying a metric ton to barrel conversion factor of 8.276.

The change in methodology was first proposed in a subscriber note published Nov. 27, 2025, available here.

The decision was communicated in a subscriber note published Dec. 29, 2025: Platts to update SAF FOB Straits assessment Feb 2 | S&P Global.

The SAF FOB Straits assessments and the new premium assessments are published on fixed pages 2013 of Platts Biofuels Alert, on fixed pages 1410 and 1411 of Platts Global Alert and Platts Refined Products Alert, and in the following publications: Biofuelscan, Fuel Ethanol report, Biomass-Based Diesel report, Oilgram Price report, Platts European Marketscan, Platts US Marketscan, Asia-Pacific/Arab Gulf Marketscan and in the Platts database. The SAF FOB Straits assessments are no longer published on fixed page 1013, effective Feb. 2.

Please send any questions, comments, or feedback to platts_biofuels@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if they are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make those not marked as confidential available upon request.

2026 calendar for FOB ARA ULSD Barges winter-to-intermediate transition

Effective Feb. 16, Platts, part of S&P Global Energy, will start reflecting German intermediate specification for ultra low sulfur diesel on a pro-rated basis in its FOB Amsterdam-Rotterdam-Antwerp (ARA) barge ULSD assessment (Code: AAJUS00).

The following calendar applies:

Winter-to-Intermediate transition:

- Feb. 16: First day reflecting Intermediate grade in the assessment
- Feb. 18: First full five-day period reflecting Intermediate grade

- Feb. 19: Last full five-day period reflecting winter grade

- Feb. 24: Last day winter grade is reflected in assessment

- Feb. 25: Intermediate fully reflected

A spreadsheet detailing the changes is available on request. Please send any comments or questions to europa_products@spglobal.com and copy pricegroup@spglobal.com.

2026 calendar for FOB ARA ULSD Barges intermediate-to-summer transition

Effective March 31, Platts, part of S&P Global Energy, will start reflecting German summer specification for ultra low sulfur diesel on a pro-rated basis in its FOB Amsterdam-Rotterdam-Antwerp (ARA) barge ULSD assessment (Code: AAJUS00).

The following calendar applies:

Intermediate to Summer Transition

- March 31: First day summer grade is reflected in the assessment

- April 7: First full five-day period reflecting summer-grade

- April 7: Last full five-day period reflecting intermediate grade

- April 9: Last day intermediate grade is reflected in assessment

- April 10: Summer-grade fully reflected

A spreadsheet detailing the changes is available on request. Please send any comments or questions to europa_products@spglobal.com and copy pricegroup@spglobal.com.

Platts corrects Jan. 13, 2026, ARA/NWE/West Med butane assessments

Platts, part of S&P Global Energy, has corrected a number of European butane assessments for Jan. 13, 2026.

The following assessments should read as:

Butane CIF NWE Seagoing (code: PMAAJ00): \$560.75-\$561.25/mt

Butane CIF NWE Large Cargo (code: PMAAK00):
\$529-\$529.5/mt

Butane FOB NWE Large Seagoing (code: PMAAL00):
\$555.75-\$556.25/mt

Butane FOB NWE Large Cargo (code: APRPB00):
\$503-\$503.5/mt

Butane FOB ARA (code: PMAAC00): \$587.75-
\$588.25/mt

Butane FCA ARA (code: PMABI00): \$591.75-
\$592.25/mt

Butane W Med FOB Coaster (code: PMAAM00):
\$918.75-\$919.25/mt

Butane CIF Med Large Cargo (code:
APRPF00)\$559-\$559.50/mt

The assessments appear in Platts European
Marketscan and Platts Global Alert.

Please send any questions to
Europe_Products@spglobal.com with a cc to
pricegroup@spglobal.com.

Platts corrects Jan. 13, 2026, Naphtha CIF NWE Cargo assessment

Please note that Platts, part of S&P Global Energy, has corrected the Jan. 13 Naphtha CIF NWE Cargo assessment. The following assessments should read as:

Naphtha CIF NWE Cargo (Code: PAAAL00):
\$534.50/mt

Naphtha FOB Med Cargo (code: PAAAI00)
\$496.75/mt

Naphtha CIF Med Cargo (code: PAAAH00)
\$519.25/mt

Naphtha FOB Rdam Barge (code: PAAAM00)
\$530.50/mt

The assessments appear in Platts European
Marketscan and Platts Global Alert pages PGA1110,
PGA1112 and PGA1114.

Please send any questions to
Europe_Products@spglobal.com with a cc to
pricegroup@spglobal.com

Ineos Europe AG to join EMEA LPG-Physical MOC

Ineos Europe AG has advised Platts, part of S&P Global Energy, that it would like to participate in the Platts Market on Close assessment process for EMEA LPG-Physical.

Platts has reviewed Ineos Europe AG and will consider information from the entity in the assessment process for EMEA LPG-Physical, subject at all times to adherence with Platts editorial standards.

Platts will publish all relevant information from Ineos Europe AG accordingly.

Platts welcomes all relevant feedback regarding MOC participation. Platts considers bids, offers and transactions by all credible and credit-worthy parties in its assessment processes. For comments and feedback, please contact Platts editors at pl_lightendseurope@spglobal.com and market_integrity_review@spglobal.com.

Platts changes CIF Mediterranean Marine Fuel 0.5% Cargo basis port to Algeciras, Jan 2

Platts, part of S&P Global Commodity Insights, has changed the basis port of the CIF Mediterranean Marine Fuel 0.5% Cargo assessment (MFCMM00) from Genoa to Algeciras, effective Jan. 2, 2026.

This follows a proposal published on Aug. 22, 2025, available here: Platts proposes to change CIF Mediterranean Marine Fuel 0.5% Cargo basis port to Algeciras, Jan 2 | S&P Global, and a decision published Sept. 19, 2025, available here: Platts to change CIF Mediterranean Marine Fuel 0.5% Cargo basis port to Algeciras, Jan 2 | S&P Global.

Following market feedback and an observed change in product flows, including the recent IMO designation of the Mediterranean as an ECA zone since May 1, 2025, Platts understands that Algeciras is the most prevalent discharge location of 0.5%S marine fuel in the region. As such, Platts has reflected this market shift by changing the basis port of its CIF Mediterranean Marine Fuel 0.5% cargo assessment.

In addition, Platts has amended the basket of ports used to calculate the FOB Mediterranean Marine Fuel 0.5% Cargo netback assessment, to reflect the following routes and weightings:

Load port	Discharge port	Weighting
Lavera	Algeciras	35%
Tarragona	Algeciras	25%
Genoa	Algeciras	20%
Sarroch	Algeciras	10%
Eleusis	Algeciras	10%

The FOB Mediterranean Marine Fuel 0.5% Cargo assessment was previously based on the following basket of routes, with equal weightings:

Load Port	Discharge Port
Sines	Malta
Haifa	Algeciras
Algeciras	Genoa
Sarroch	Malta
Fos	Barcelona

Effective Jan. 2, 2026, the FOB Mediterranean Marine Fuel 0.5% Cargo market continues to be assessed using a freight differential to the CIF Mediterranean assessment, based on the flat rate for the new weighted basket outlined above, multiplied by the daily Worldscale assessment for the 30,000 mt Cross-Mediterranean route assessed in Platts Dirty Tankerwire. Reflecting 2026 Worldscale rates, the new basket flat rate for 2026 is \$7.41/mt.

The assessment is published in Platts European, Asia Pacific and US Marketscans in the tables entitled "Marine Fuel," and on Platts Global Alert and Platts Refined Products alert pages 30 and 1114.

Please send any feedback, questions or comments to europe_products@spglobal.com and pricegroup@spglobal.com.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches Butane DAP Lagos, LPG Freight Houston-Lome price assessments from Jan 2

Platts, part of S&P Global Energy, has launched new daily Butane DAP Lagos, LPG Freight Houston-Lome price assessments, effective Jan. 2, 2026.

Platts has observed shifting supply dynamics for refined oil products in West Africa. The commissioning of the Dangote refinery has changed the balance of supply and demand in the Nigerian market. At the same time, demand for LPG as a clean cooking fuel across West Africa has increased the overall flow of product to the region's major import hubs, increasing the overall need for price transparency in this fast growing region.

In response to these changes and in consultation with market participants, Platts has launched a West African butane assessment (LPHMO00) reflecting coaster-size butane clips delivered DAP Lagos, Nigeria, beginning Jan. 2.

The DAP Lagos butane assessment will reflect refrigerated cargoes with a size range of 1,000 mt-6,000 mt for delivery 5-15 days from the date of publication, with value normalized to reflect the mean of the delivery period, into Lagos, Nigeria.

At the same time, Platts has also launched a spot Houston-Offshore Lome LPG Medium Gas Carrier freight assessment (LPHMN00), effective Jan. 2, to provide more transparency to the West African LPG freight market.

The assessment reflects the cost of chartering an LPG MGC vessel, transporting a 22,000 metric ton cargo of LPG from Houston, Texas, to Offshore Lome, Togo, loading five to 15 days forward from the date of publication.

Platts may publish pricing data or fixtures for other cargo sizes or laycans, but these may be normalized for assessment purposes.

The DAP Lagos assessment is published in US dollars/mt and reflects the transactable value at 4:30 pm London time.

LPG freight is commonly traded in the spot market on a \$/mt basis, reflecting the cost of chartering a ship of a specified size on a particular voyage for a given cargo size. These values typically include port costs.

New Platts West Africa LPG, LPG freight assessments:

Assessment	Symbol	Monthly Average
Butane DAP Lagos \$/mt	LPHMO00	LPHMO03
LPG Houston-Lome MGC	LPHMN00	LPHMN03

The launch of these assessments were first announced in a subscriber note published Dec. 22, available here.

The new assessments follow the London publishing schedule and will appear on Platts Global Alert and Platts Refined Products Alert fixed page 1122 from Jan. 2, and in Platts LPGaswire, European Marketscan and Clean Tankerwire from Feb. 2.

If you have any comments or questions about this announcement, please contact Europe_products@spglobal.com and pricegroup@spglobal.com.

Platts to update European fuel oil and feedstocks 2026 netback formulas

Platts, part of S&P Global Energy, will update the formulas to derive its netback and net forward assessments to reflect 2026 Worldscale rates.

The changes to the formulas are effective Jan. 2, 2026, for the following assessments:

High sulfur fuel oil

The flat rate used to calculate FOB NWE HSFO cargoes (PUABB00) as a freight netback from CIF NWE HSFO cargoes (basis Rotterdam) will be \$6.74/metric ton.

The flat rate used to calculate FOB Mediterranean HSFO cargoes (PUAAZ00) as a freight netback from CIF Mediterranean HSFO cargoes will be \$8.32/mt.

The Rotterdam harbor dues are \$1.15/mt.

Low sulfur fuel oil

The flat rate used to calculate CIF NWE LSFO cargoes (PUAAL00) as a freight net-forward from FOB NWE LSFO cargoes will be \$7.74/mt.

The flat rate used to calculate CIF Mediterranean LSFO cargoes (PUAAJ00) as a freight net forward from FOB NWE LSFO cargoes, in the absence of other daily bid, offer and trade information, will be \$15.17/mt.

The flat rate used to calculate FOB Mediterranean LSFO cargoes (PUAAK00) as a freight netback from CIF Mediterranean LSFO cargoes will be \$8.53/mt.

Marine fuel

The flat rate used to calculate FOB Mediterranean Marine Fuel 0.5% cargoes (MFFMM00) as a freight netback from CIF Mediterranean Marine Fuel 0.5% cargoes will be \$7.41/mt.

Fuel oil feedstocks

The flat rate used to calculate FOB NWE VGO cargoes (AAHMX00 and AAHNB00) as a freight netback from CIF NWE VGO cargoes will be \$5.13/mt.

Please note that spot market bids, offers and trades may, where relevant, also be taken into account when assessing FOB NWE VGO cargoes.

The flat rate used to calculate FOB Mediterranean VGO cargoes (ABBAD00 and ABBAC00) as a freight netback from CIF Mediterranean cargoes will be \$5.20/mt.

The Rotterdam harbor dues are \$1.15/mt.

Please send any comments and feedback to Europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing. Platts will consider all comments received and will make comments not marked as confidential available upon request.

Europe barge MOC dates for Christmas, New Year holidays 2025

Please note that, effective Dec. 22, Dec. 23, and Dec. 24, 2025, Platts publishes bids, offers, and trades in its Market on Close assessment process for refined product barges that load 7-15 days forward, not the usual 3-15/5-15 days forward range. Please note that the assessment remains unchanged.

The full details for each day can be seen below:

On Dec. 22, MOC dates will be Dec. 29 - Jan. 6 (FE dates: Dec. 29 - Jan. 2; MW dates: Dec. 31 - Jan. 4; BE dates: Jan. 2 - Jan. 6)

On Dec. 23, MOC dates will be Dec. 30 - Jan. 7 (FE dates: Dec. 30 - Jan. 3; MW dates: Jan. 1 - Jan. 5; BE dates: Jan. 3 - Jan. 7)

On Dec. 24, MOC dates will be Dec. 31 - Jan. 8 (FE dates: Dec. 31 - Jan. 4; MW dates: Jan. 2 - Jan. 6; BE dates: Jan. 4 - Jan. 8)

In addition, on Dec. 29, Platts will publish bids, offers, and trades in its MOC for refined product barges that load 4-15 days forward, not the usual 3-15/5-15 days forward range. Please note that the assessment remains unchanged.

The full details for each day can be seen below:

On Dec. 29, MOC dates will be Jan. 2 - Jan. 13 (FE dates: Jan. 2 - Jan. 6; MW dates: Jan. 4 - Jan. 8; BE dates: Jan. 9 - Jan. 13)

On Dec. 30 and Dec. 31, Platts will publish bids, offers, and trades in its MOC for refined product barges that load 6-15 days forward, not the usual 3-15/5-15 days forward range. Please note that the assessment remains unchanged.

The full details for each day can be seen below:

On Dec. 30, MOC dates will be Jan. 5 - Jan. 14 (FE dates: Jan. 5 - Jan. 9; MW dates: Jan. 7 - Jan. 11; BE dates: Jan. 10 - Jan. 14)

On Dec. 31, MOC dates will be Jan. 6 - Jan. 15 (FE dates: Jan. 6 - Jan. 10; MW dates: Jan. 8 - Jan. 12; BE dates: Jan. 11 - Jan. 15)

On Dec. 24 and Dec. 31, all European oil assessments will be on a 12:30 London time basis, with

all cut-offs and timings commensurate with a close at that time.

Please note that on Dec. 25 and Dec. 26, as well as Jan. 1, no European and African oil assessments will be published out of London, in line with the Pricing Holiday Schedule. For a full list of services affected, please consult: <https://www.spglobal.com/platts/en/our-methodology/holiday>

Please send any comments or questions to europe_products@spglobal.com with a copy to pricegroup@spglobal.com

Platts to update 2026 European Jet, ULSD and Gasoil netback and net-forward assessment formulae effective Jan. 2, 2026

Platts, part of S&P Global Energy, will update the formulae to derive its netback and net-forward assessments to reflect updated Worldscale freight rates for 2026.

The updates are effective Jan. 2, 2026, across the following Platts price assessments for the Europe and Africa region.

Effective Jan. 2, 2026, the following formulae apply:

Diesel:

Assessment Name 2026 netback/net-forward formula

ULSD 10ppmS FOB NWE Cargo (AAVBF00) \$5.86/mt

ULSD 10ppmS FOB NWE Basis Le Havre Cargo (AAWZD00) \$7.16/mt

ULSD 10ppmS CIF NWE Basis Le Havre cargoes (AAWZC00) \$1.23/mt

ULSD 10ppmS FOB Med Cargo (AAWYY00) \$8.36/mt

Gasoil:

Assessment Name 2026 netback/net-forward formula

Gasoil 0.1%S FOB NWE Cargo (AAYWR00) \$8.40/mt

Gasoil 0.1%S FOB Med Cargo (AAVJI00) \$7.93/mt

Jet Fuel:

Assessment Name 2026 netback/net-forward formula

Jet FOB Med Cargo (AAIDL00) 2026 WS rate for

Augusta-Rotterdam, inclusive of Rotterdam port fees

Please send any questions or comments to Europe_products@spglobal.com with a CC to pricegroup@spglobal.com

Worldscale rates for 2026 Russian oil product netbacks to be updated

Effective Jan. 2, 2026, Platts, part of S&P Global Energy, will update the Worldscale flat rates per metric ton for the following routes for Russian oil products netbacks: Novorossiisk-Genoa, Vysotsk-Rotterdam, St. Petersburg-Rotterdam and Primorsk-Rotterdam.

For more information on the above flat rates, please see the Worldscale website.

Please send any comments or questions to europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.

Platts launches eWindow instruments for 0.1%S ultra low sulfur fuel oil barges Dec 15

Platts, part of S&P Global Energy, has launched eWindow instruments for 0.1%S ultra low sulfur fuel oil barges loading on FOB basis Rotterdam-Antwerp, effective Dec. 15.

These appear on the eWindow as: Platts Marine Fuel 0.1% Brg

This launch includes eWindow instruments for front-end, mid-window, and back-end dates.

Approved participants in the Platts Market on Close assessment process are able to submit bids or offers for publication directly through the eWindow communication tool or through an editor who would then publish the bids and offers using the software.

The newly listed Platts Marine Fuel 0.1% Brg eWindow instruments reflect a minimum volume of

1,000 mt, and a maximum of 5,000 mt.

Platts has established clearly defined timing guidelines and standards of incrementability that apply when publishing bids and offers in the MOC in order to ensure an orderly and transparent price assessment process.

INCREMENTABILITY: Bids and offers for Platts Marine Fuel 0.1% Brg instruments may be improved by a maximum of \$1/mt every 20 seconds via the eWindow or \$1/mt every 60 seconds via an editor.

REPEATABILITY: Market participants have 30 seconds to repeat a bid or offer, following a trade via eWindow, and 60 seconds via an editor.

EXTENSION: An extension of one minute is triggered by any price changes or a rebid or reoffer in the last 20 seconds before the close at 16:30:00 hours London time.

CUTOFF: For bids and offers submitted directly through the eWindow communication tool, the cut-off time is 16:05:00 London time. For bids or offers submitted via an editor, the editor must receive full information by 16:00:00.

As per Platts editorial guidelines, market participants can withdraw a bid or offer from the MOC at any time, so long as no other potential trading counterparty has indicated interest to buy or sell into the bid-offer.

Platts eWindow provides direct entry and management of credit filters, which should mirror those normally applied outside of the MOC.

Guidelines for the publication of bids and offers in the MOC are published in the Oil Timing and Increment Guide available here.

Any entities interested in participating in the MOC process for Fuel Oil barges should refer to: MOC Participation Review Request | S&P Global.

Platts provides training to participants interested in learning more about the use of the eWindow software. Participants can contact ewindow@spglobal.com directly for training requests.

Platts launched an assessment for 0.1%S ultra low

sulfur fuel oil barges on Dec. 1.

Please send any feedback or questions to Europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available to the public upon request.

Platts launches FOB Rotterdam 0.1%S ultra low sulfur fuel oil barge assessment Dec 1, 2025

Platts, part of S&P Global Energy, has launched a daily assessment for FOB Rotterdam 0.1%S ultra-low sulfur fuel oil (ULSFO) barges Dec. 1, 2025.

This follows an increase in demand for the fuel in Europe following the implementation of the Mediterranean Emissions Control Area from May 1, 2025.

Specifications: The assessment reflects RMG 380 specifications as per ISO 8217: 2017 Petroleum products — Fuels (class F) on all parameters, with the addition of a minimum viscosity of 30 CST, in line with market feedback.

Size: The assessment reflects a barge size of 1,000 mt, with an operational tolerance of plus/minus 5%. Platts also publishes indications between 1,000 mt and 5,000 mt inclusive. Indications higher than 1,000 mt may be subject to normalization.

Port basis & assessment period: The assessment reflects the value of barges loading FOB basis Rotterdam-Antwerp, for loading 3-15 (Monday to Tuesday) or 5-15 (Wednesday through Friday) days forward, with value normalized to reflect the mean value of these loading ranges. Platts understands that barges typically trade for the front five days, middle five days or the back five days.

Product Origin: In line with all European fuel oil assessments, the FOB Rotterdam ULSFO barge assessments reflects non-Russian origin.

Assessment: The assessment is assessed as a flat price, in line with Platts' existing 3.5% and 0.5% Rdam barge assessments.

Nomination: A seller can nominate any reasonable terminal in the Amsterdam-Rotterdam-Antwerp region for a FOB Rotterdam-Antwerp barge trade reported in the Market on Close assessment process, and the buyer should not unreasonably refuse this option. The seller should compensate the buyer for the demonstrable incremental freight cost associated with loading in an alternative port to Rotterdam-Antwerp. For FOB North West Europe barges across all products, the buyer must give the seller 48 clear working hours' notice of the date of loading required. The nomination procedure expectations are in line with Platts' 0.5% Rdam barge assessment expectations, as stated in the Europe and Africa Refined Oil Products Methodology guide, found here: <https://www.spglobal.com/content/dam/spglobal/ci/en/documents/platts/en/our-methodology/methodology-specifications/refined-products/refined-products-europe-africa-specifications.pdf>

Platts will launch eWindow instruments for this assessment on Dec. 15.

The FOB Rotterdam Marine Fuel 0.1% Barge assessment will be published to code FBEBR00, and on fixed pages PGA0030/PRF0030, PGA1112/PRF1112, PGA1510/PRF1510 and in European Marketscan.

Platts first proposed to launch this assessment on Oct. 10 in a subscriber note and published its decision to launch the assessment in a subscriber note on Oct. 31.

Please send any comments, feedback and questions to Europe_products@spglobal.com and pricegroup@spglobal.com.

For written comments, please provide a clear indication if comments are not intended for publication by Platts for public viewing.

Platts will consider all comments received and will make comments not marked as confidential available upon request.
